# Video Proctoscope USB

Video Proctoscope[USB] camera is a unique product which enables the Practitioner to view proctoscopy [for Rectal Examination]images on a Laptop or a Computer system. It comes with user friendly software to store images.

This is a small Camera with in built LED light system which can go easily inside the normal proctoscope and one can view clear image and show it to the patient also. This Camera has a facility to freeze and store images also. Pre and post Operative images also can be shown on a system or a laptop.

This camera can be used with almost all sizes of Proctoscope. It is a very cost effective portable device which comes in small pouch. This device runs on USB , so does not require any extra power supply or batteries.

An excellent portable USB Video proctoscope with software at a reasonable price.
